

# NIEMAN NURSERY AND LANDSCAPING

## TREE CARE GUIDE

### Cut Trees:

Displaying your tree in a stand that you can fill with water is the best way to maintain freshness and minimize needle loss.

Make sure you have a fresh cut. Put your tree in the reservoir type stand the day you cut it. If you purchase a pre-cut tree we can give it a fresh cut.

After you get your tree home make sure you place it in water as soon as possible. Give it plenty of water to absorb, especially the first few days. Check every other day to make sure you have water in the stand.

If possible, set up your tree away from sources of heat like fireplaces, heat vents, heaters and direct sunlight.

### Live Trees:

Minimize the amount of time that the tree is in your house. Leave it outside for as long as possible. Make sure that it has plenty of water.

Try to keep them standing up straight. They are still growing.

When you plant it, make sure that the top of the burlap is slightly above ground level.
